2019 Road Construction Projects

Shelly and Sands Inc. is scheduled to start milling and resurfacing the following streets in September. **Milling** on these streets could start as early as this **Friday, September 13th**.

- Darwin Drive
- Estel Road
- Winston Court East and West
- Larkstone Drive
- Havenhill Drive
- Banbury Drive
- Clubview Blvd. South from the Township line east to a hundred feet short of Worthington Hills Country Club entrance.

Once the milling is complete, Larkstone Drive, Darwin Drive and Winston Court East, West and North will also have a **Fibermat** installed under the asphalt overlay.

A **fibermat** is a chipseal interlayer that contains fiberglass strands embedded in the emulsion. It is designed to help waterproof the base of the pavement while also greatly delaying and minimizing cracking of the new overlay.

The emulsion with the fiberglass strands will be applied to the streets milled surface, then covered by a thin layer of chipped stone. The chipseal is then covered by the asphalt overlay.

**Please use caution when driving on these streets.** There will be loose stone exposed after the streets are chip sealed until the time they are overlaid. This usually is less than a week.

The small colored flags marking important underground utilities will continue to stay in place in your yards until the entire project is complete.
