

# Time Sensitive Information About Your Property

Letting You Know About Upcoming Field Activities

## Dear Neighbor,

You are receiving this letter because you own property or live in the area where AEP Ohio representatives plan to upgrade the local power grid and we wanted to provide you with an update.

We announced the North Columbus Transmission Line Rebuild Project this past spring. As the project progresses, project team members are looking at alternatives to help resolve and minimize concerns from the community. To assist in developing a solution, it is necessary to conduct ground penetrating radar and soil borings within the existing easement area.

**Ground Penetrating Radar (GPR)** helps identify underground utilities. A device that looks similar to a lawnmower, and is nondestructive to the soil, uses radio frequencies to detect objects below the ground's surface.

**Soil Borings** use a drill to bring up soil samples in select areas and then backfill the holes. The samples are tested to determine soil conditions in the area. Soil can affect structure location, type of structure and the structure's foundation design.

Crews plan to begin field work around November 17 and anticipate concluding in about one month, depending on weather and other factors. The project team plans to evaluate results and distribute an update to the community, including a revised schedule, in early 2026.

OR Colan, LLC. continues to represent AEP Ohio as the right-of-way agent during the field work. Please contact Joe Greene at 216-235-3870 or [jgreene@orcolan.com](mailto:jgreene@orcolan.com) if you have immediate questions or concerns.

Sincerely,

**Maggie Beggs**  
Project Outreach Lead  
AEP Ohio
